Abstract: From all the currently known mycotoxins, aflatoxin B-1 (AFB(1)) presents the greatest public health and agro-economic significance. Its metabolite, aflatoxin M-1 (AFM(1)) has toxicological properties comparable to those of AFB(1), albeit a lower carcinogenic potency.

The occurrence of AFM(1) in milk marketed in Portugal and the evaluation of the exposure degree to the toxin through its consumption in an average citizen were studied. Estimation of the corresponding concentration of AFB(1) in feedstuffs was also aimed.

Forty samples representing the totality of the pasteurized and UHT half-skimmed milk brands marketed in the country were surveyed. Determination of AFM(1) was carried out by means of a commercial competitive ELISA.

Eleven samples (27.5%) featured a contamination above the detection limit (mean 23.4 +/- 24.0 ng/L). Two milk samples (5%) both produced in Azores presented AFM(1) values that surpassed the legal maximum limit (50 ng/L). A third sample, also from the Azores Islands, presented a very high value of contamination. These results are interesting given that dairy production in Azores is traditionally pasture-based which is considered as low risk system regarding AFs contamination.

Adult average dietary exposure to the fungal toxin through milk consumption was estimated at 0.08 ng/kg bw/day, which is inevitably higher for infants, considered the main risk group. The concentration of AFB(1) in the feeds consumed by the producing cows was estimated as 1.46 mu g/kg.

The results call for further studies in an attempt to identify and thus control potential influencing factors in the only region where milk samples contaminated above the legal limit were produced. (C) 2012 Elsevier Ltd. All rights reserved.

Journal Citation Reports®

Journal performance metrics offer a systematic, objective means to critically evaluate the world's leading journals

- Delivers quantifiable statistical information based on citation data
- Provides a variety of impact and influence metrics, including the Journal Impact Factor and *Eigenfactor*®
- Includes rank-in-category tables, journal self-citations, and Impact Factor boxplots

Web Search Tools:

Scientific WebPlus

Find scientifically relevant Web content fast! Search the open Web and quickly see the most relevant content for the topics you care about, with *Scientific WebPlus*.

Web Sites:

BiologyBrowser

A free database of resources and links for the life sciences information community.

Index to Organism Names

The world's largest online database of scientific organism names.

ResearcherID.com

ResearcherID provides the global research community with an invaluable index to author information. Each author listed is assigned a unique number, which serves as a fast, easy identifier.

Science Watch®

Weekly tracking of hot or emerging papers and research fronts in this free Web resource for science metrics and analysis. Includes interviews, first-person essays, podcasts, and profiles from scientists, journals, institutions, and nations, selected using *Essential Science Indicators*™ from Thomson Reuters.

Thomson Reuters

Find out more about information-based solutions available to the academic, business, and R&D communities.

To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

PoP web site

PoP book

Welcome to Publish or Perish

Publish or Perish is a software program that retrieves and analyzes academic citations. It uses [Google Scholar](#) to obtain the raw citations, then analyzes these and calculates a series of citation metrics. The results are available on-screen and can also be copied to the Windows clipboard (for pasting into other applications) or saved to a text file (for future reference or further analysis).

- Getting started
- Documentation
- The Publish or Perish Book

The Publish or Perish software and documentation are copyright © 1990-2011 Tarma Software Research Pty Ltd. All rights reserved.

The Publish or Perish Book is more than just a guide to the software. It is a tremendously accessible introduction to bibliometrics and citation analysis, which many academics and graduate students find a pretty arcane and impenetrable topic.

[Read more Amazon reviews about The Publish or Perish book...](#)

Getting started

To get started with Publish or Perish:

- Go to one of the analysis tabs (Author analysis, Journal impact analysis, General citation search),
- Enter your search terms,
- Click Lookup

The software will contact [Google Scholar](#), then parse the results and present them in an easy to use list along with the most important citation statistics.

To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

Note: This Search history will contain the latest 50 searches you perform in this session.
